

Robel Fekadu Hailu

Software Engineer

A.A, Ethiopia | [\(251\) 916-416-707](tel:(251)916-416-707) | robelfekadu@gmail.com | <https://linkedin.com/in/robavelii> | <https://github.com/robavelii>

Professional Experience

Senior Full stack Developer | [Mereb Technologies](#)

04/2025 – Present

- Overseeing the customization, implementation and deployment of Bahmni-based EMR system labeled LeanHealth integrated with Odoo ERP and OpenMRS for end-to-end healthcare workflows, including patient registration, triage, appointments, pharmacy, billing, and lab results.
- Developed custom Odoo modules to support automated quotation generation, accurate sales attribution, and integration with Santim Pay.
- Implemented SMS-based patient notifications for lab results through a custom microservice integrated with EMR data flows.
- Architected and maintained Docker-based infrastructure, configuring Nginx reverse proxy, SSL/TLS security, and environment-based service profiles.
- Designed and executed data migration pipelines from legacy SQL Server and PostgreSQL databases, mapping to LeanHealth CSV import formats for clinical forms and patient records.
- Created custom analytical reports and dashboards, optimizing operational visibility for clinical and administrative teams.
- Collaborated with cross-functional teams to improve patient throughput and reduce manual processes through automation and system integrations.
- Implemented CI/CD pipelines for automated deployments

Senior S.E Consultant | Amref Health Africa

12/2024 – 05/2025

- Architected and developed a robust Telegram-based polling and feedback collection bot utilized across health centers across the country, enabling real-time qualitative data collection and staff engagement for improved efficiency.
- Designed a scalable data collection system featuring automated polling schedules, manual feedback triggers, real-time notifications, and advanced session management to ensure seamless user interaction and data integrity.
- Enhanced the Telegram bot with multilingual support, custom response validation, and dynamic question branching to accommodate diverse user needs and streamline feedback processes.
- Engineered a secure NestJS REST API integrated with Google Looker Studio, utilizing a custom AppScript and a bespoke community connector to seamlessly sync data, enabling advanced analytics capabilities with an interactive custom dashboards and automated reporting for actionable insights.
- Collaborated with cross-functional teams to define key performance indicators (KPIs), optimizing Looker Studio visualizations for stakeholder presentations and operational decision-making.

Senior Software Engineer | [360Ground](#)

10/2023 – 04/2025

- Spearheaded the development of the Ethiopian Stat Bank system in collaboration with Statistics Norway (SSB) and INSA teams, leading the architecture and implementation of core microservices backend and frontend components
- Led the technical implementation of the Electronic Market Information System (eMis) for the Ethiopian Statistics Service, building multiple dashboards and a mobile application. Improved data collection and accessibility for the Ethiopia Statistics Services.
- Contributed to the development of the National Business Portal, a comprehensive permit management system, implementing microservices architecture, administrative dashboard and the main portal that streamlined the permit application process for construction and business licenses across Ethiopia.
- Played a key role in the implementation of a real-time gaming functionality for the live TV game show 'MedaShi'. Successfully running for three seasons.
- Automated data entry and parsing processes using custom scripts, reducing manual data import time and improving data accuracy.
- Developed core components of the Meda pay React SDK, enabling streamlined integration of Meda payment gateway on client websites.
- Migrated critical projects from AWS to on premise infrastructure, reducing cloud-related costs while enhancing data security and system control.

- Enhanced user experience for Meda Cinema ticket booking app by migrating from a super app to a single-app architecture, simplifying maintenance and improving performance.

Backend Developer | [SoftDeveloper](#)

06/2023 - 10/2023

- Built and documented RESTful APIs for 'Suitor,' a custom CRM tool supporting an Australian suit rental company's operations, enhancing user engagement through automated communication and streamlined order management.
- Designed and implemented batch ordering and report generation features, enabling automated report creation.
- Developed SMS messaging, authentication, and location management functionalities within the CRM to improve communication and operational efficiency.
- Enhanced order management features, including order tracking and scheduling, to streamline customer workflows.

Software Engineer | Meklit Technologies

04/2022 -05/2023

- Developed a full-stack application (RND Match Tracking) for sports analytics, managing tracking and scheduling workflows and integrating automated analysis, increasing task efficiency by 40%.
- Designed system architecture and authored comprehensive documentation, including SRS and SAD, for project alignment and transparency.
- Developed static websites using HTML, CSS, JavaScript, and WordPress for small business clients, creating visually appealing and user-friendly layouts.

Skills

Technical Skills:

- Programming Languages: JavaScript, TypeScript, Python, Java
- Frontend: React, Next.js, Vue.js, Angular
- Mobile: Flutter
- Backend: Node.js, Express, Nestjs, Django, FastAPI,
- Databases: PostgreSQL, MongoDB, MySQL, Redis
- ORM: Prisma, TypeORM
- Cloud & DevOps: AWS, Firebase, Docker, Nginx, Cloudflare, GitHub Actions

Other Skills

- RabbitMQ, Kibana, Minio
- ElasticSearch, GCP(Big Query),
- Looker Studio, ODK
- JIRA, Slack

Languages: English (C1), Amharic

Education

Addis Ababa Science and Technology University

Addis Ababa, Ethiopia

Bachelor of Science in Software Engineering

2016 - 09/2021
